

The Bayou Bridge Pipeline

Built for Louisiana, By Louisiana

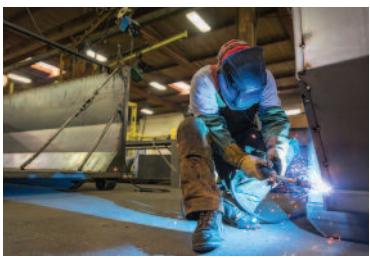

The Bayou Bridge Pipeline will create American jobs and new Louisiana infrastructure — as well as additional benefits to other industries:

- **Steel:** 100% of the pipe is American-made and was produced in Baton Rouge, Louisiana

- **Construction:** Shovel-ready project that will generate approximately 2,500 construction jobs

- **Manufacturers:** Partnering with local Louisiana contractors, material suppliers, small businesses, and landowners, as well as providing more fuel and lubricants for manufacturing processes

- **Small Businesses:** Millions in spending at local restaurants, stores, and hotels during construction

- **Agriculture:** More reliable infrastructure for farmers who depend on fuels and lubricants for production, harvesting, growing, and transporting agricultural goods

- **Consumers:** And safer infrastructure for consumers who use fuels, consume agricultural products, and other crude based commodities

All of this is at risk if activists and agitators stand in the way of jobs and millions of dollars in direct spending in Louisiana. Do not delay. Agencies, please give the Bayou Bridge Pipeline a fair review and expeditious approval.

Stand with Louisianians for Louisiana.
